

Before diving into the details of the table, it is essential to understand the context of the data presented. The table below provides an overview of various fruits, their quantities, prices per unit, and the total cost for each type. This information can be useful for understanding the pricing dynamics and inventory requirements for a fruit store or market analysis.

Item	Quantity	Price	Total
Apples	10	0.50	5.00
Oranges	8	0.75	6.00
Bananas	15	0.30	4.50
Grapes	2	3.00	6.00
Pineapples	5	2.50	12.50
Strawberries	20	0.25	5.00

In addition to providing a snapshot of the current fruit inventory, the table can also be utilized for various analytical purposes. For instance, by examining the price per unit and total cost, one can derive insights into the cost-effectiveness of different fruits. This data can help in making informed decisions regarding purchasing strategies, stock management, and pricing policies. Additionally, understanding these dynamics can aid in predicting market trends and consumer preferences, ensuring that the fruit supply aligns with demand.
